

Inventory – Array methods exercise

Using map, filter, reducer and find

```
const inventory = ['grapes','bananas','peaches','bananas','apples','apples','bananas']  
const quantity = [2,5,3,4,6,1,9]
```

1- build an array of objects that contains all this inventory information. it must have only one entry for each product. If the number of entries on the inventory array is 1 it must double the amount (use filter for)
