

Inventory – Array methods exercise

The allowed array methods to this exercise are: map, filter, reducer and find.

```
const inventory = ['grapes', 'bananas', 'peaches', 'bananas', 'apples', 'apples', 'bananas']  
const quantity = [2,5,3,4,6,1,9]
```

1- build an array of objects that contains all this inventory information. it must have only one entry for each product. If the product on the inventory array is unique it must double the quantity of the product
