Taking in consideration the following data as an example of possible data
– José – 42 years old, with drivers licence, portuguese
– Mike – 28 years old , with drivers licence, english
– Maria - 21 years old, without drivers licence, portuguese
– Manolo – 17 anos , com drivers licence, spanish
– Hugo – 13 anos, sem drivers licence, portuguese

Create a small program that:
1 – Checks if someone is able to drive (must be at least 18 years old and have a drivers licence)
2 – If they are able to drive show if they have a portuguese drivers license
3 – On other condition check the age difference relatively to 20 years old
4- In a final condition mention if the person less then 10 years old, between 10 and 20 years old or more then 35 years old
